Understanding Video Game In-App Purchases

**SAFE SETTINGS**

It's important that parents try this out with children as they venture into the world of gaming. Together they can build an understanding of how these purchases work and discuss which are really good value, and which are over-priced. Like pocket money, it can be a good way to teach children about virtual currency and online purchases.

It's important to understand that it can be easier to make repeat purchases online compared to buying toys or stickers over the counter. Also, many games are set up so players can use items from one game in other games. This can mean that parents are unaware of trades. These are usually small purchases of just a few pounds. However, games often reward players with many hundreds of these purchases that can mean children spend a considerable amount of money.

**VALUING IN-APP PURCHASES**

Understanding how modern games make money enables you to guide your family to find the best value in the games they play. Whether it's taking advantage of the many free to play control of the game creator.

It's worth noting that Microsoft, Sony and Nintendo have agreed to disclose the odds of getting rare items in loot boxes. Game publishers on these platforms will have to reveal the chances of each purchase. Some publishers do this already. Together with your child, you can set-up spending limits on the account.

You can also avoid putting your credit card details in by using pre-paid cards that work like book tokens. If you do add credit cards ensure you set up a password on the account.

It's important that parents try this out with children as they venture into the world of gaming. Together they can build an understanding of how these purchases work and discuss which are really good value, and which are over-priced. Like pocket money, it can be a good way to teach children about virtual currency and online purchases.

**SKIN TRADING**

Because players can trade and swap items in games, the relative rarity of these items creates a thriving market where these items are exchanged. This trading aspect of games like Rocket League can be an enjoyable way for players to get the items they want, similar to swapping football stickers in the playground.

Because these items are often just visual changes to how characters look they are called "skins", although, in reality, this includes items that do more than change appearance. It's important for parents to understand that these "skin" trades are often arranged on websites or apps outside the game itself. This can mean that parents are unaware of trades. Also, the third-party communities are unregulated and beyond the control of the game creator.

**LOOT BOXES & SKIN BETTING**

LOOT BOXES

Some video games also offer what has been called "loot boxes" as a way to purchase these items. Similar to purchasing a pack of Panini football stickers or a Lego MiniFigure in foil packaging, players don’t know exactly what they will get. They may get a common item that has a low value in the game. Equally, they may get a rare item that has a high value. These interactions are not considered to be gambling according to the UK Gambling Commission, although sometimes they have a similar appearance because the items obtained have no monetary value outside the game. Only games that contain simulations of real-world gambling have the PEGI Gambling descriptor.

However, games that offer in-app transactions of any kind are flagged with the PEGI In-App Purchase descriptor on the box or at point of sale online.

Use of this “skin” currency can be taken further by websites that use it for gambling. “Skin betting” is when players use these virtual items they have earned or purchased in games as gambling currency. Players can also use these sites to bet with “skins” on eSports competition outcomes. It's important for parents to be aware of this activity, as it can consume considerable amounts of money if a player is buying in-game items for this purpose.

Where this becomes a legal issue is when the “skins” you win can be converted to cash. As the Gambling Commission stated in its Young People and Gambling 2017 Report, “Where gambling facilities are offered to British consumers, including with the use of in-game items that can be converted into cash or traded (for items of value), a gambling licence is required.”

In particular, this means that these sites must not be accessible or advertised to children. Tackling operators making gambling facilities available to children is one of the Gambling Commission’s priorities. This has been demonstrated by action taken against unlicensed websites providing facilities for gambling using in-game items as methods of payment. Along with the Gambling Commission, the games industry strongly opposes “skin” betting sites as they infringe the legal agreements that underpin games. Games companies work with law enforcement agencies to clamp down on these sites.
